DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prelec et al. (U.S. Patent # 5,793,185) in combination with Crass et al. (U.S. Patent # 6,252,378).

Prelec et al. disclose the claimed invention a multiple use electrical distribution device (figure 1-5), at least one rechargeable storage unit (figure 4, item 9), at least one standard 110 V outlet receive a electrical plug (figure 4, item 3), a jumper cable. However Prelec et al. does not disclose the utilization of the technique for a clock circuit and the LED display and a timer. Crass et al. teaches the utilization of the similar technique for a clock circuit and the LED display and a timer (figure 1, item 45 and 31 respectively). It would have been obvious one having an ordinary skill in the art at the time invention was made to modify Prelec et al. jump start device by utilizing the technique taught by Crass et al. for the purpose of increasing efficiency of the jump start device.

3. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prelec et al. (U.S. Patent # 5,793,185) in combination with Crass et al. (U.S. Patent # 6,252,378) and further in combination with Johnson (U. S. Patent # 5,111,127). Prelec et al. in combination with Cress et al. disclose the claimed invention as explained in the claims 1-2 and 4, above except the utilization of the technique for solar panel unit. Johnson teaches the utilization of the similar technique for solar panel unit (50,51 and 57). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Prelec et al. in combination with Cress et al.'s portable power supply by utilizing the technique taught by Johnson for the purpose of saving electricity and increasing battery life.
